

North America Construction | Risk Engineering

Technology Adoption Maturity Index (TAMI)

Technology is set to change the construction industry. New and emerging technologies are showing potential to reduce risk, improve productivity, and increase profitability on construction projects. However, overall tech adoption amongst contractors remains low, as many lack the resources to explore and navigate the vast universe of available solutions. AXA XL is ready to help. As your partner in risk, we are committed to supporting our customers' knowledge and adoption of construction technologies through various tools and offerings including our Construction Ecosystem, Technology Library, and Risk Engineering services.

AXA XL's Technology Adoption Maturity Index (TAMI) is a risk engineering benchmarking service that evaluates a contractor's level of construction technology adoption against their industry peers. The assessment provides both a quantitative score and qualitative suggestions to help our customers reduce risk and advance their business through technology. TAMI provides a roadmap for technological advancement, tracking progress over time so customers can remain at the cutting edge of innovation year after year.

Here's how it works

- Your Construction Risk Engineer will schedule and facilitate your TAMI, which consists of one meeting for the assessment, and another meeting to review and discuss the report together.
- Attendees for both meetings should include the **Risk Manager** and any others who have deep knowledge of your construction technology usage and implementation, e.g. **Chief Data Officer, Director of Innovation, Director of Technology, etc.**
- During the first meeting, we will discuss which and what types of construction technologies your company has adopted, and to what extent they are implemented and across your enterprise.
- Your personalized report will include an overall TAMI score and individual scores across six categories. It will compare your technology adoption against the current industry adoption, highlight areas where your adoption is industry-leading, and provide suggestions on how you may improve your score.
- Our suggestions are supported by our **Technology Library**, which contains a variety of technology solutions curated by AXA XL to be valuable and viable. We leverage our market presence to drive the best terms and pricing for our customers on these specific technologies when you refer through us.

Categories we review:

- Enterprise Software
- Field Management
- IoT Sensors & Monitoring
- Imagery & Extended Reality
- Innovation & Implementation

As the industry continues to advance in technological maturity, so should your adoption. Customers are encouraged to revisit the TAMI each year to advance your knowledge of new tech solutions and continue progressing on your technology adoption journey.
